The prior art fails to teach a method of positioning a catheter that includes introducing a catheter into a blood vessel, transluminally positioning the catheter so that the distal end of the shaft is in the ascending aorta and an expandable occluding member attached to the catheter near the distal end is disposed between the coronary ostia and the brachiocephalic artery, expanding the occluding member, and measuring pressure within the expandable occluding member with a pressure transducer within the expandable occluding member.

The prior art also fails to teach a method of positioning a catheter that includes providing a catheter having a shaft with an inner tubular member and an outer tubular member and an expandable occluding member attached to the catheter near the distal end,

rotating the outer tubular member proximally with respect to the inner tubular member to reduce the profile of the occluding member on the shaft of the catheter, translumenally positioning the catheter in the ascending aorta so the occluding member is disposed between the coronary ostia and the brachiocephalic artery, expanding the occluding member to block fluid flow therethrough or prevent migration of the occluding member into the aortic root.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
